

Creating a
Single Source of Truth
for Hospital Analytics

How often do you walk into a meeting, and the numbers don't seem right?

Then, you spend most of the meeting fact-checking them.

This is a common issue within hospitals because there is really no standard for a single source of truth. Even if hospitals have a single source of truth, they struggle to maintain it.

This problem is compounded for large health systems with multiple financial systems. In addition, many hospitals run hard coded reports or manage statistics in manual spreadsheets that only analysts can view.

Errors are typically found because something doesn't look right, and more reports are run to figure out what's wrong with the hard-coded report in question.

We have the solution.

The Sixth Sense Intelligence Solution

Our system automates the creation of primary and secondary operational statistics directly from charge codes. If revenue is billed, then the statistic is counted. This is critical for hospitals:

- With more than one billing system
- That use Epic as their billing system because of their unique data structure

We create a unified virtual charge master equivalent that simultaneously transforms your data into key statistics.

SMaRT™ Analytics

Our application, Stat Manager and Revenue Tracking (SMaRT), is a cloud-based tool that calculates stats on a daily basis. In addition, it monitors and alerts managers when new charge codes are utilized.

Monitoring is key to maintaining a single source of truth because the charge master constantly changes due to CMS rules, payer contracts, pricing updates, and new services. Our process is transparent and easy to maintain.

Interactive Revenue Analytics Dashboards

In addition to automating the collection of statistics and workload units, our SMaRT analytics platform produces interactive revenue analytic dashboards that answer your trending, pricing, and volume questions. These analytics can be pushed out via email automatically or on-demand.

A Clear Return on Your Investment

A project like this typically pays for itself.

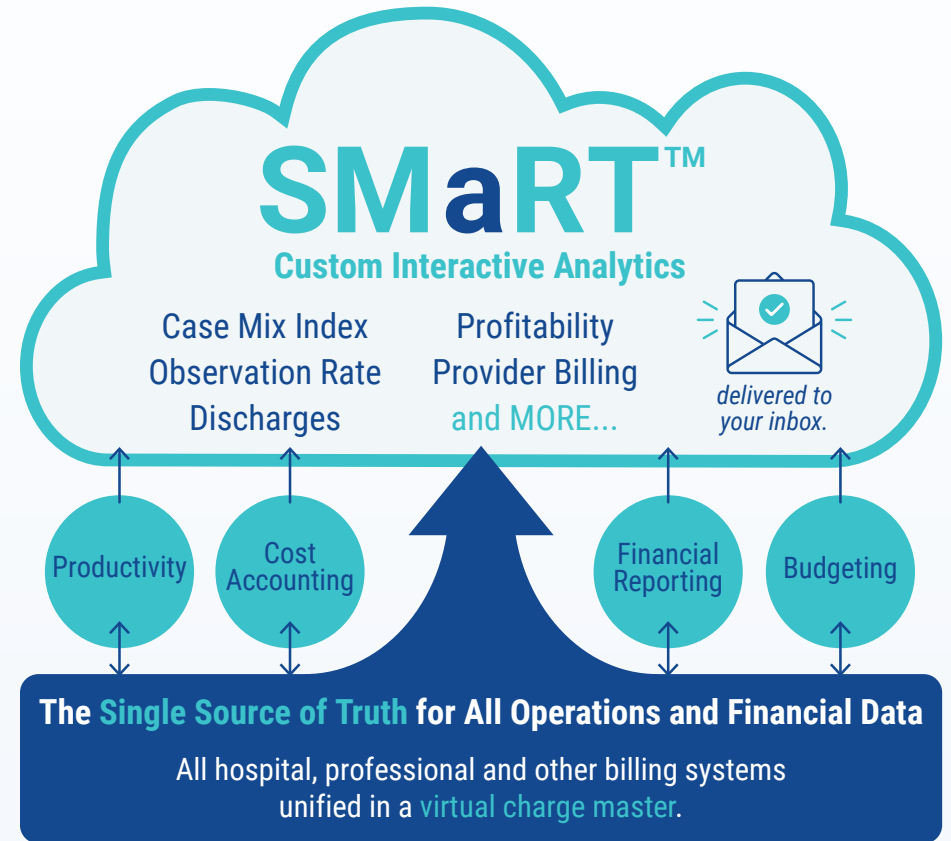

In fact, one hospital we worked with discovered over \$2 million in lost outpatient charges due to a change in the charge capture process.

Not only do we develop a foundation for a single source of truth, but we build confidence in the analytics, streamline the stat capture process, and improve net revenue.

Let us be your Sixth Sense so you, too, can see data differently.
